

Videx Computerized Impact Cutters

- ✚ Cut-off length repeatability: ± 0.1 mm by using a positive stop.
- ✚ The Impact cutter can work with Videx Bar Feeder or with any other bar feeder.
- ✚ In Videx Bar Feeder the blanks are automatic centered with the cut-off quill, enabling a very quick change-over of wire diameters.
- ✚ The bar is supported during the cutting operation, assuring a perfectly square cut face even when running mild steel.
- ✚ Stainless steel run-off guide requires NO adjustment along a wide range of wire diameters.
- ✚ Quick-Change cut-off tools; ideal for small batches.
- ✚ Optional removal and sorting of the first & last parts of each bar into a separate short parts bin.
- ✚ Computer console, allows entering the bar length & the required cut length. The machine will divert all the good parts to one side and the residual slug to the short parts bin on the other side.
- ✚ Digital Length Readout (optional).
- ✚ Compact Design.
- ✚ Wide wire diameter range in each machine. Total wire diameter range between $\varnothing 6.0$ mm and $\varnothing 50$ mm.
